Increase Body Awareness While Increasing Your Activity

Ruth Werner

You have to give us credit: as a culture, Americans are incredibly interested in getting fit. We invest every year in new diets, exercise programs, and supplements for weight loss and improved energy. Low-range estimates suggest that Americans spend about \$2.6 billion each year on gym memberships alone.

We also tend to pitch full speed into any given commitment. If we're going to get fit, by golly, we're going to do it now, regardless of how long it took us to get into our current state. We don't do things by half measures, and moderation is not in our nature. So how do we keep ourselves injury-free while honoring our commitment to exercise and get healthy?

sports field seems to appeal to our competitive spirit--especially when we're surrounded by others who all seem to be doing better than we are. Combine this kind of human drive with poorly trained athletic trainers who give bad advice about form, pacing, and effort, and we have a recipe for potential problems.

Exercise is only effective when it occurs without injury. Any new exercise program requires some caution, even if it is comparatively easygoing. And more challenging programs are safest and most successful when new participants build up their activity levels carefully and receive excellent guidance about form.

Moderation is key when beginning a new exercise program

DOES IT HAVE TO BE ALL OR NOTHING?

We all know that starting an exercise program doesn't actually mean we'll finish it. When we throw ourselves into an ambitious new routine, we are likely to overdo it and get hurt. Then, we get discouraged, and may give up entirely, only to start the cycle over in another year or so.

Overdoing things in the gym or on the

injuries throughout our entire lifespans. In the best circumstances, they heal well, with a minimum of internal scar tissue, and function returns to practically normal levels. When things are ideal, that sprained ankle you got playing soccer at age 12 doesn't affect your ability to walk in your 30s. The lumbar

strain you got from picking up the heavy laundry basket 15 years ago resolved well, so at 62, it won't hinder your golf game. We are able to adapt to minor injuries, and we learn how not to exacerbate them.

But when we introduce a new exercise program, especially if that exercise program is more demanding, or demanding in different ways than we have experienced before, we risk the flaring up of old injuries. Scar tissue does not have the weight-bearing capacity of healthy muscle or connective tissue. This is when that old sprained ankle may make itself known, and that weakness in your back will definitely have opinions about your new routine. Sometimes you might feel like your new commitment to fitness was not the best idea.

INJURIES CAN HAPPEN ANY TIME

CrossFit is one program that gets a lot of attention because of its reputation for being especially demanding. But any type of exercise can lead to injury if correct form is not observed. Zumba, Jazzercise, and other dance-like programs bring a risk of foot and leg injuries, including sprained ankles, plantar fasciitis, and stress fractures, because the risk for twisting at the knee is so high.

If you aren't paying close attention to your own limits, even yoga can be a source of soft-tissue injury: delayed soreness, problems at the neck and sacroiliac joints, or other injuries. One massage therapist reported seeing several injuries related to a prolonged yoga headstand, probably in a student who was not ready for this challenge.

HOW CAN MASSAGE HELP?

Massage can help you deal with pain or soreness from your exercise regimen and can also help shorten recovery periods so you can train more efficiently. Although massage therapists are not primary care providers, and cannot diagnose conditions or prescribe specific treatments, your therapist may be able to offer excellent advice for dealing with a fitness-related injury. He or she may also have suggestions about warm-ups, cool-downs, and postexercise stretching, or be able to point you to an appropriate coach or other professional for specific exercise needs and to help prevent future injury.

The incidence of exercise-related injury

has a lot to do with people not paying attention to their own needs. One of the many things massage therapy offers to people who want to become healthier and more fit is the chance to become more aware of your own body in a powerfully positive way. Increased body awareness and self-appreciation may be the best tools for helping you increase activity levels without hurting yourself. In this way, you can reach your goals with power and joy, rather than with pain and injury.

Ruth Werner is a former massage therapist, a writer, and a continuing education provider. She wrote A Massage Therapist's Guide to Pathology (Lippincott Williams + Wilkins, 2013).

Massage can get you back on track following an exercise-related injury

Facial Massage for Lymphatic Drainage

Natalia Doran

A well-performed facial massage will help relieve puffiness and improve skin tone and complexion. Other physical benefits include stimulation of the skin's immune mechanisms, firming of weak muscles, tissue regeneration, and antiaging effects. Mental benefits include stress relief and a greater awareness of the body-mind connection. And applying pressure and movement through massage can help to normalize the function and composition of the connective tissue, and free it of harmful substances.

Lymphatic Massage

The body's lymphatic system drains away the debris from our cells. It transports water out of the tissue, along with waste substances: bacteria, cell fragments, immobile cells, inorganic substances, large molecular fats, proteins, and viruses. This process is constantly happening all over the body. With massage, the lymph system can move up to 10 times more fluid than it normally does.

Manual lymph drainage (MLD), which was developed by Emil Vodder, PhD, is a type of gentle massage that accelerates the natural circulation of the lymph and encourages its movement away from swollen areas. MLD is firm, but gentler than ordinary massage. Because the lymph vessels are all interlinked, lymph flow will be affected in the entire region of the area being massaged. Other types of lymphatic massage include lymph drainage therapy, developed by Bruno Chikly, MD.

A facial massage that involves lymphatic work improves circulation to the skin, which increases nutrition to the skin cells and speeds up the filtering of water in and out of cells. The vasodilation of the surface capillaries during massage improves skin color, and facial massage also improves elasticity and suppleness of the skin. With facial massage, the skin becomes more balanced, less prone to breakouts, and more resistant to infection. Massage movements also influence muscular hypertension

through the autonomic nervous system.

Natalia Doran, MD, is the founder and president of the International Skin Beauty Academy in Illinois.

Facial massage has a host of health benefits.

Healthy Grilling Tips

Summertime and grills go together like a hot dog and mustard. But could that hot dog actually be doing you harm? Alice Bender, registered dietician at the American Institute for Cancer, says that diets high in beef, pork, and lamb, as well as processed meats like hot dogs, are linked to an increased risk of colon cancer. She suggests that sticking with chicken and fish can "make this summer's backyard grilling both healthier and more flavorful." Use herbs and spices to amp up flavor, and try marinating for 30 minutes before you grill, which can reduce the amount of heterocyclic amines--the potentially cancer-causing compounds formed when grilling.

Here are some other tips to help reduce health risks associated with the grill:

TRIM THE FAT

Fat can increase smoke, which may contain carcinogens, so choose leaner meats and trim excess fat.

DON'T BURN IT

Charred, well-done meat can increase your risk of pancreatic cancer, according to a study from the University of Minnesota.

BUT COOK IT THROUGH

Make sure that you hit the USDA recommendations for internal temperature, which can be found at www.foodsafety.gov.

MORE VEGGIES!

Grilling vegetables does not create the same heterocyclic amines as grilling meats. Plus, veggies have less fat and cholesterol in general.

KEEP IT CLEAN

Don't let a charred mess build up on your grill, because it will eventually find its way onto your food.

*It is a happy
talent to know
how to play*

-Ralph Waldo Emerson

Happy Days of Summer are here!! Time to take it easy, take a vacation and take care of your skin.

To help you celebrate Summer there is a SUMMERTIME BELLANINA SPECIAL!!

This \$80.00 Bellanina special runs from June 15, 2015 through August 15, 2015. Take advantage of this offer as this will be the last \$80.00 Bellanina discount (regular price:\$90.00).

This is great time of year for some anti-aging skin care and for some of the de-stressing that Bellanina provides.

Hope your summer is safe and fun-filled.

Be well and know you are all appreciated,
Marolyn
