The Power of Touch

In a High-tech World, It Pays to Reach Out

Nora Brunner

Physician and holistic health pioneer Rachel Naomi Remen once confessed that as a pediatric intern she was an unrepentant baby kisser, often smooching her little patients as she made her rounds at the hospital. She did this when no one was looking because she sensed her colleagues would frown on her behavior, even though she couldn't think of a single reason not to do it.

The lack of basic human contact in our high-tech medical system reflects a larger social ill that has only recently started to get some attention-touch deprivation. The cultural landscape is puzzling. On the one hand, we are saturated in suggestive messages by the

skin-to-skin contact is beneficial to human health, American social norms inhibit this most basic form of human interaction and communication. Despite our supposedly enlightened attitudes, we Americans are among the most touch-deprived people in the world.

"Touch deprivation is a reality in American culture as a whole," writes Reverend Anthony David of Atlanta. "It's not just babies needing to be touched in caring ways, or the sick. It's not just doctors and nurses needing to extend it. It's all of us, needing connection, needing to receive it, needing to give it, with genuine happiness at stake."

Tension is who you think you should be.
Relaxation is who you are.

-Chinese Proverb

High-tech can mean low-touch. Ensure you're getting the tactile connection humans require.

mass media; on the other hand, the caring pediatrician is afraid someone might look askance at her planting a kiss on a baby's forehead. What's wrong with this picture?

Social Norms

Unfortunately, touch has become, well, a touchy subject. Though there's growing scientific evidence that

Distant, Disconnected

How did we come to deprive ourselves so tragically? According to Texas psychology professor David R. Cross, PhD, there are three reasons Americans don't touch each other more: fear of sexual innuendo, societal and personal

disconnection aided by technology, and the fact that the ill effects of non-touching are simply not that obvious and don't receive much attention.

It's no surprise Americans are often afraid physical touching signals romantic interest, which leads to the twin perils of either having our intentions misunderstood or wondering if someone's gesture is an uninvited advance. This ambiguity is more than enough to scare most people from taking someone's arm or patting them on the back.

The potential for the loaded gesture is further complicated by our litigious society in which unwelcome touch can mean, or be interpreted as, dominance, sexual harassment, or exploitation. People in the helping professions are regularly counseled on how to do their jobs without creating even a hint of ambiguity. In one extreme example, counselors at a children's summer camp were given the advice that when kids proactively hugged them, the counselors were to raise both arms over their heads to show they hadn't invited the contact and weren't participating in it. One wonders how the innocent minds of children will interpret this bizarre response to their spontaneous affection.

Another reason for touch phobia, according to Cross, is that we live in a society with far-flung families and declining community connections. Technology plays a significant role in the way we communicate, and it seems we move farther away from face-to-face with communication every invention. How ironic that the old company jingle telephone encouraged us to "Reach Out and Touch Someone" gave way to the slew of electronic devices we have today, all ringing and beeping for our attention. While these devices were invented to improve communication, some people wonder if the net effect is lower quality in our exchanges of information.

While there is scientific research showing non-touch is detrimental to health, Cross says those negative effects aren't obvious. The effects of a lack of touch are insidious and long-term and don't amount to a dramatic story for prime time.

"Humans deprived of touch are prone to mental illness, violence, compromised immune systems, and poor self-regulation," Cross says. So serious are the effects of touch deprivation, it's considered by researchers to be worse than physical abuse.

Benefits of Touch

Stated more positively, science does support the preventive health benefits of touch. For example, Tiffany Field, PhD, founder of the Touch Research Institute, notes that in a study on preterm infants, massaging the babies increased their weight and allowed them to be discharged earlier. Discharging babies earlier from expensive neonatal intensive care units could save the healthcare system \$4.7 billion annually.

In other research, scientists at the University of North Carolina found the

stress hormone cortisol was reduced with hugging. Cortisol is associated with anger, anxiety, physical tension, and weakened immunity.

Massage therapy has been found useful in reducing symptoms such as anxiety, depression, pain, and stress, and is helpful for those suffering with a variety of illnesses, including anorexia nervosa, arthritis, cancer, fibromyalgia, and stroke. While more research is needed, massage therapy has also been shown to reduce symptoms associated with alcohol withdrawal and smoking cessation, and can strengthen self-esteem, boost the immune system, increase flexibility, and improve sleep.

As a nation, we are still finding our way in terms of increasing our touch quotient; but those who make their way into a massage therapy room are farther along than most.

Massage helps boost self-worth and contribute to emotional well-being and connection.

A Walking Workout

Have Fun While Burning More Calories

Imagine the lone hiker, backpack laden with sleeping bag and bedroll, wielding a well-worn walking stick as she climbs the side of a snow-covered mountain. For centuries, trekkers have used walking sticks, partly as a defense against attacking wildlife, partly to aid in balance, and partly as support on long, arduous climbs. But in recent years, many hikers have replaced the single wooden walking stick with hiking poles.

Held in both hands and used to distribute weight more evenly through the four limbs, wilderness hikers have found poles invaluable for safety, efficiency, and comfort on long hikes. What wilderness hikers have known for some time now is that walking poles are a great way to relieve pressure on knees, ankles, and the back. They encourage better posture and provide a total body workout by engaging the upper body.

Now, hiking poles are showing up in urban areas as fitness walkers discover the benefits they provide. Nordic walking--similar in technique to crosscountry skiing--is a great way to get a whole body workout, increase oxygen consumption, and burn more calories than regular walking or even speed walking. This total body workout burns 40 percent more calories and consumes 25 percent more oxygen. Poles can be purchased at most outdoor sporting stores, along with rubber tips for use on paved paths.

TECHNIQUE

Adjust your poles to approximately 70 percent of your height and loosely secure the straps around your wrists. Hold the poles at an angle behind you so they propel you forward with a slight bend at the elbow. Use an opposite hand-and-heel motion as you walk--right heel strikes as left pole tip contacts the ground. And you're on your way! Don't be shy with your poles. Remember: You're burning 40 percent more calories.

For more information, visit www.walking.about.com/od/nordicwalking/index.htm.

Add walking poles, and burn more calories.

Easing Holiday Angst

Five Stress Busters for a Joyous Season

You enter the holiday season with the best of intentions -- looking forward to time spent with family and friends, decorating, shopping, baking. But as soon as you pile holiday activities on top of an already busy life, you're likely to find yourself relating more to Ebineezer Scrooge than Martha Stewart.

Consider these five suggestions to keep holiday stress at bay:

1. Determine a Shopping Budget

For many, gift giving is an important part of the holidays, serving as a way to express love and appreciation for friends and family. But when the credit card bills arrive in January, you may discover you've extended your holiday stress well into the New Year. Plan your budget in

advance, determine what you can spend, and stick to the plan.

2. Create a Time Budget

Many will make a shopping budget, but what about making a time budget? Before accepting every invitation this year, decide ahead how many parties you can and want to attend while maintaining your sanity. Make choices about your time commitments based on what you'd really like to do this year, rather than what you think you should do or what you've always done. Don't forget to leave time for yourself.

3. Set Food-Intake Boundaries You'll likely be tempted to eat in excess, and don't be too hard on yourself if you don't stick to your pre-holiday eating

standards. But do decide ahead of time just how much you'll deviate from your eating routine.

4. Stick to Your Exercise Regimen
Regular exercise is a powerful stress
buster. You'll feel better, sleep better,
avoid weight gain, boost your immune
system, and maintain a positive outlook
about yourself. While it may seem like
an easy time concession to make, don't
give in to the idea. Stick to exercise, and
you'll thank yourself for it.

5. Take Time to Rest

Take time from your schedule to honor the cycles of the season. The holidays fall during winter solstice -- the shortest day of the year. Learn from nature, and get plenty of rest.

Every boy in his heart, would rather steal second base than an automobile.

-Tom Clark

WHY MASSAGE?

Feel guilty about getting massages? Think massages are an extravagance? THINK AGAIN....

FACTS from Cedars-Sinai's Study:

- 1. One Swedish massage produced decreased levels of the stress hormone cortisol
- 2. One Swedish massage produced decreased levels of arginine vasopressin, a hormone that contributes to aggressive behavior.
- 3. One Swedish massage produced elevated lymphocytes, which helps the immune system.

Massage is an investment in your health. Get one today.
